

HIGH INTEGRITY SOFTWARE FOR TODAY'S RAILWAY

As rail networks become more congested and your system upgrades are given less downtime, you need to be convinced your software and systems are reliable from the start.

For 26 years, Altran Praxis engineers have been developing high-integrity, high-reliability software and systems within fixed budgets.

Altran Praxis' systems engineers partition critical functions and demand early proof to avoid extensive testing. This underlying approach to development repeatedly provides an assured and cost-effective solution.

If your on-board, wayside or control systems require ultra-reliable software delivered in dependable timescales then come and test us in Hall 6.1, Stand 112 and be convinced.

Altran Praxis is part of the Altran Group comprising 17,000 engineers worldwide, Altran Praxis is delivering software, safety and systems engineering from its offices in UK, France, Holland and India.
